RSA My Page | ID Verification and Secure Enrollment

Secure and simplify user enrollment with flexible, secure, policy-driven identity verification

In a world where remote/hybrid work is the norm, RSA My Page is your gatekeeper, offering a flexible, comprehensive identity verification (ID verification) and secure enrollment solution. Start with the end in mind—secure, efficient onboarding that doesn't compromise on convenience and that reinforces user defenses against account takeovers. Part of RSA ID Plus, which provides a complete identity and access management (IAM) solution, My Page ID verification is available to all ID Plus E2 and E3 subscribers.

Seamless Onboarding: A Unified Frontline Defense

Picture a new employee's first day—no paperwork, no hassle. Just a smooth digital experience where HR and IT converge. RSA My Page fosters this collaboration, ensuring legitimate users are enrolled easily and securely.

Simple, Powerful Workflows

RSA My Page allows organizations to coordinate a user's credentials during navigation through the self-service portal. Each step aligns user actions with policy-driven automation, reducing the risk of compromised accounts with a personalized verification process.

For Leaders Who Strive For Excellence

My Page helps security and IT leaders build a secure future. IT directors use My Page to streamline operations, and IT professionals celebrate the solution's no-code, standard-based configuration. CISOs appreciate its high standard for secure enrollment and assistance verifying a user's identity from the start.

Enhancing security together: our partnership with ID Dataweb

The RSA partnership with ID Dataweb powers the secure enrollment workflow. RSA My Page integrates ID Dataweb's advanced ID verification services to enhance the user enrollment process. This integration begins with an initial authentication method, followed by ID Dataweb's verification workflow, facilitated through our user verification OpenID Connect (OIDC) connector. This connector allows administrators to configure and deploy ID verification workflows without custom coding, leveraging the OIDC standard framework for seamless integration.

RSA and ID Dataweb provide a variety of secure enrollment templates. Each template is designed to meet the diverse needs of our customers, ensuring the highest pass rates for legitimate users and a secure, frictionless enrollment experience.

- **MobileMatch:** Verifies identity through phone possession, ownership, and credit bureau data, offering a streamlined verification process

- **BioGovID:** Employs a live selfie and government ID match for high-assurance ID verification

- **DynamicKBA:** Ensures users are who they say they are with dynamic knowledge-based questions

Take the first step. Contact your RSA Sales Representative and transform how your organization handles identity verification and secure enrollment.

About RSA

The AI-powered RSA Unified Identity Platform protects the world's most secure organizations from today's and tomorrow's highest-risk cyberattacks. RSA provides the identity intelligence, authentication, access, governance, and lifecycle capabilities needed to prevent threats, secure access, and enable compliance. More than 9,000 security-first organizations trust RSA to manage more than 60 million identities across on-premises, hybrid, and multi-cloud environments. For more information, go to RSA.com.
